

AERZORBER®

Driconeq proudly presents the new **AERZORBER®** - an innovative shock absorber for DTH applications. The **AERZORBER®** uses an unique air cushion technology instead of mechanical absorption by rubber or coil springs.

Benefits of the **AERZORBER®** include:

- Function as a float sub when changing pipes
- Reduction of recoil stresses when drilling
- Lower rotary head maintenance
- Improved penetration rates

The end result is improved drill performance, componentry reliability and a reduction of the overall drilling costs.
